

Standard Pacific oyster

Shellfish Culture
TASMANIA

Standard Pacific oyster – setting the industry standard.

The standard Pacific oyster produced by Shellfish Culture sets the industry standard for quality.

We apply strict quality control to all stages of production, including broodstock selection for factors such as shape, growth, meat and uniformity.

Other measures include advanced larval rearing, and nursery cultivation and precise grading measures from egg to point of sale.

Support for research and development of selectively bred oysters remains an ongoing priority at Shellfish Culture. We continually strive to ensure a superior product for delivery to the farm.

Stock is grown at numerous sites, ensuring reliable supply. Our range includes standard, spawnless and thoroughbred oysters. Shellfish Culture is an industry leader in the production of spawnless Pacific oysters. Our selective breeding

program has yielded a truly extraordinary spawnless product – the Great Southern oyster.

Discounts are available for bulk and consecutive purchases. Supported by frequent specials, these provide farmers with an oyster that represents value for money in every respect.

Standard Pacific oyster sizes

Screen Size (micron)	Oyster Size (mm)
